Integration with Simple Certificate Enrollment Protocol also allows CMDM end-users to enroll for and install Comodo client certificates for the purposes of two factor authentication and identification. Administrators also have mail access control and can whitelist devices that have access to company mail server. Monitoring of users and devices on the network may also be performed by administrators, including communication with users directly by sending push messages to their devices.
Error logs from CMDM portals are collected through mails. Comodo will automatically send mail to mdmsupportreports@comodo.com in the event of errors in the product.

CMDM includes the following product features and functions:
enrollment, retirement of device, certificate installation, user/role management, profile management, device diagnostic info, locate device, corporate wipe (selective wipe) device, full wipe device, theft protection (lock, siren), AV control, schedule, auto reaction and reporting, root/jailbreak detection configure & set passcode native restrictions on Android and IOS, native configurations on IOS and Android, app source control, application blacklist block/unblock/uninstall/install application, show application inventory, and reporting & statistics.
